To Whom It May Concern:

My name is John Boos. I am the Founder/ CEO of HendrenAI. We are a B2B SaaS platform that supports health systems, managed care organizations and pharmaceutical companies with AI/ ML technology. HendrenAI is an AI-driven healthcare technology company committed to advancing America's leadership in artificial intelligence. As the U.S. government continues to shape policies that will determine the trajectory of AI innovation, we want to share our perspective on the critical policy actions needed to sustain and enhance America's AI competitiveness—particularly in healthcare, where AI is poised to drive transformative improvements in patient outcomes, operational efficiency, and cost containment.

Maintaining U.S. AI Leadership in Healthcare

The U.S. has long been a global leader in AI research and commercialization, but as international competition intensifies, it is imperative that our regulatory environment supports innovation rather than stifling it. Healthcare AI is at a pivotal moment—it has the potential to revolutionize drug pricing, market access modeling, care management, and health system operations, yet regulatory uncertainty and overburdensome compliance requirements risk slowing progress.

Priority Policy Actions for Sustained AI Competitiveness

To ensure that the U.S. remains at the forefront of AI-driven healthcare innovation, we urge consideration of the following:

1. **Balanced AI Regulation** – While patient safety and data privacy are paramount, AI regulations should be risk-based and outcome-driven rather than imposing one-size-fits-all compliance burdens. Overly complex approval processes could push AI innovation offshore, leaving the U.S. behind.
 2. **Encouraging Public-Private Collaboration** – The government should actively engage healthcare AI companies like HendrenAI to develop policies that foster responsible innovation without excessive barriers. Sandboxes and pilot programs can help accelerate AI deployment while maintaining oversight.
 3. **Supporting AI Infrastructure & Talent Development** – Sustained investment in computing infrastructure, AI workforce training, and research partnerships will be essential to maintaining a competitive edge against China and the EU.
- Streamlining AI Reimbursement Pathways** – The U.S. must modernize

4. reimbursement frameworks to incentivize AI adoption in healthcare, ensuring that Medicare, Medicaid, and private payers recognize the value AI brings to efficiency and patient care.
5. Preventing Regulatory Overreach that Stifles Innovation – While ethical AI use is critical, policies must be designed to enable rapid iteration, testing, and deployment in healthcare without excessive red tape that delays real-world impact.

HendrenAI is actively working with payers, PBMs, health systems, and pharmaceutical stakeholders to deploy AI solutions that reduce costs, improve access, and enhance patient outcomes. We believe that with strategic policy support, the U.S. can continue leading the world in AI-driven healthcare transformation.

We welcome the opportunity to discuss these issues further and contribute to shaping policies that keep the U.S. at the forefront of AI innovation. Please let us know a convenient time for a discussion.

Sincerely,

John Boos, PharmD, MBA

Founder/ CEO
