(I sent this message before, but without the required text at the end. This is intended as a revision of and replacement for that message. Please disregard my previous message.)

Last year, I did some micro task work for a large Internet company, through the website Prolific. Over an hour, I was to look through text generated by their AI, and check it via web search against reputable resources.

During that time, I reviewed six passages of text, reaching in length from a few sentences to several paragraphs. My job was to mark a passage a wrong if I could find any incorrectness in it.

Of the six passages, I had to mark five as being wrong.

Because of this, as well as other news about generative AI being frequently wrong, and the many errors I have seen it make personally, I must tell you that using it for any purpose would be a grave mistake, if you cared about the quality of the outcome in any way.
