Julianne Knable

My name is Julianne Knable and I am a graduating senior from Avonworth High School. I researched the impact of generative AI on cybersecurity for a semester course, and recently studied this administration's viewpoint on AI regulation. Based on my two months of student research, I think that regulation of AI is necessary as it grows within America and around the world. There is a constant need for security measures to protect the country as more AI is involved, without replacing humans. AI in cybersecurity has created new possibilities to easily detect and prevent threats. However as AI continues to grow and strengthen, the potential loss of security and privacy does too. Communities have already grown for the better with the help of AI and advancements in technology but in order to stay a healthy community, not all forms of AI should be available to everyone. As cybersecurity works with the growing workings of technology, there will be a stronger need for a balance between technology and human resources.
