Re: AI Action Plan

Dear Directors Kratsios and Panchanathan,

For over 20 years, Hologic has been a champion for women's health, developing cutting-edge medical technologies designed to deliver exceptional clinical outcomes. Our innovations empower healthcare professionals to detect, diagnose, and treat health conditions affecting women worldwide.

Hologic has pioneered innovation in women's health, particularly in the use of Artificial Intelligence (AI). AI is increasingly crucial in aiding the diagnosis of breast and cervical cancers. As a leading innovator, Hologic is committed to advancing screening technologies for these diseases. Hologic developed the first and only FDA-cleared digital cytology system that uses AI to pinpoint the cells that cytologists and pathologists should review, enhance workflows and enable greater collaboration across lab and other healthcare settings to detect cervical cancer. Our digital portfolio also includes a suite of FDA-cleared mammography AI products, which use algorithms to score image quality, assess breast density, and detect suspicious lesions with high sensitivity (94%). The outputs of the AI algorithms are integrated into radiologists' normal reading workflow to drive continuous clinical and efficiency improvements in reviewing cases.

As more AI services are integrated into clinical workflows and adopted by clinicians, certain statutory barriers need to be addressed. Congressional action is needed to ensure existing regulations and policies reflect the current state of AI technology and do not inadvertently hinder its safe and effective deployment. To ensure patient access to advanced breast cancer detection

technology, Congress should consider review of relevant policies to allow for the adoption of AI to enhance screening and early detection. Furthermore, establishing clear reimbursement pathways for AI-driven diagnostics and treatments is critical to ensure that beneficiaries and clinicians can access these services. Reimbursement policies that recognize the value of AI in improving patient outcomes and reducing health care costs will incentivize companies to invest in research and development, ultimately leading to more technological advancement and clinical impact for patients.

We appreciate the opportunity to share our views and look forward to collaborating with you to ensure that patients and providers have access to FDA-authorized, rigorously validated healthcare AI. Please contact me with any questions regarding this RFI response.

Regards,

Julie Khani
