

Dear Networking and Information Technology Research and Development (NITRD) National Coordination Office (NCO):

This comment responds to your request for input on the Development of an Artificial Intelligence Action Plan (Plan). You have asked for priority actions that should be included in the Plan.

Science fiction has persuaded the public that AI is an existential threat. This illusory threat encourages government to *overregulate* the technology. For example, recent proposals for pauses, moratoria, and licensing schemes will harm American innovation and competitiveness, and should *not* be included in the Action Plan.

I develop this argument in my article, “Rogue Artificial Intelligence, Science Fiction, and the Law,” which will appear in Volume 41, Issue 1 of the Santa Clara High Technology Law Journal. The article will be published online shortly. Please consider it in your deliberations.

Thank you for considering this comment.

This document is approved for public dissemination. The document contains no business-proprietary or confidential information. Document contents may be reused by the government in developing the AI Action Plan and associated documents without attribution.
