Subject: [External] AI Action Plan: Please consider this serious inconsistency
Date: Tuesday, March 11, 2025 2:56:26 AM

CAUTION: This email originated from outside your organization. Exercise caution when opening attachments or clicking links, especially from unknown senders.

To whom it may concern,

1: AGI threatens the US (and NATO) as much as all military threats combined. Why does the US spend \$800 billion/year on its military but less than \$0.1 billion/year on AI alignment/safety?

2: AGI being equally dangerous isn't an extreme opinion: the median superforecaster sees a 2.1% chance of an AI catastrophe (killing 1 in 10 people), the median AI expert sees 5%-12%, other experts see 5%, and the general public sees 5%. To justify 8000 times less spending, you must be 99.999% sure of no AI catastrophe, and thus **99.95% sure that you won't realize you were wrong and the majority of experts were right** (if you studied the disagreement further).

3: "But military spending isn't just for protecting NATO, it protects other countries far more likely to be invaded." Even they are not 8000 times less likely to be attacked by AGI. US foreign aid is only \$100 billion/year, so protecting them can't be the real reason for military spending.

4: The real reason for the 8000fold difference is habit, habit, and habit. Foreign invasion concerns have decreased decade by decade, and AGI concerns have increased year by year, but budgets remained within the status quo, causing a **massive** inconsistency between belief and behaviour.

5: Do not let humanity's story be so heartbreaking.
