I appreciate the opportunity to provide input on the development of the AI Action Plan as required by Executive Order 14179, Removing Barriers to American Leadership in Artificial Intelligence. Given the rapid advancements in AI and its increasing role in national security, economic competitiveness, and workforce transformation, I would like to highlight key priority areas in education and workforce development. To maintain U.S. leadership in AI, it is essential to build a skilled workforce that integrates AI expertise with cybersecurity, ethics, and public sector applications. I recommend the following policy actions: First, create new funding or increase funding for initiatives such as the CyberCorps: Scholarship for Service (SFS) program to support AI-cybersecurity education, ensuring a pipeline of talent to protect AI-driven national infrastructure. Second, encourage federal and state investments in developing AI curricula that integrate cybersecurity, ethics, and adversarial AI defenses across K-12, undergraduate, and graduate levels. Third, support industry-academia partnerships to develop AI certification programs, providing opportunities for federal employees, veterans, and underrepresented groups to upskill in AI.
