Subject: Response to the Request for Information on the Development of an Artificial Intelligence Action Plan

Dear Sir or Madam,

I appreciate the opportunity to provide input on the forthcoming **Artificial Intelligence (AI) Action Plan**, which will play a crucial role in shaping the United States' competitive position in AI research, development, and deployment. AI is a transformative technology that should be treated as an asset to national innovation, economic growth, and security rather than a domain of excessive regulation and disproportionate scrutiny.

As an engaged citizen and strong proponent of AI-driven progress, I submit the following considerations for your review:

I. The United States Must Prioritize AI Leadership to Remain Globally Competitive

Artificial Intelligence is not merely an industry innovation but a critical pillar of national strength, both economically and militarily. The most significant risk the U.S. faces is **not AI itself, but the failure to advance its development at a pace that ensures global leadership**. Other nations, including China, are making substantial investments in AI without the same regulatory constraints. The United States must recognize that restrictive policies will not slow down AI development abroad but will instead **shift innovation away from American companies and institutions**.

To avoid this risk, the AI Action Plan must:

1. Establish **clear and aggressive milestones** to measure AI advancement relative to global competitors.
2. Incentivize **strategic public-private partnerships** to accelerate AI adoption across critical sectors.
3. Minimize bureaucratic obstacles that hinder AI deployment in government and industry.

A **risk-based approach** should account for **not only the theoretical risks of AI but also the real-world consequences of failing to lead in this domain.**

II. AI Should Not Be Subject to a Higher Standard of Scrutiny Than Other Technologies

AI is being disproportionately regulated compared to other technologies that pose similar or greater risks. Automobiles continue to cause fatalities, yet society does not require perfection before allowing their use. Social media platforms spread misinformation, yet they are not held to impossible content accuracy standards.

By comparison, AI is often expected to be **free from bias, perfectly explainable, and incapable of making errors** before it is deployed. These standards are **unrealistic and counterproductive**. The AI Action Plan must take a **realistic and pragmatic** approach that treats AI as a tool like any other, rather than as an inherently exceptional risk.

To ensure this, the plan should:

1. Avoid regulatory asymmetry that **holds AI to higher standards than comparable technologies**.
2. Establish policies that **focus on AI risk mitigation rather than unattainable elimination of risk**.
3. Recognize that **innovation inherently involves uncertainty and that excessive caution leads to stagnation**.

III. The Government Should Not Intervene in Workforce Displacement Caused by AI

Technological progress has **always** resulted in labor shifts. The invention of the steam engine, the printing press, and the personal computer each disrupted entire industries, yet they also created new opportunities. AI is no different.

The government should **not focus on artificially protecting outdated job roles but instead facilitate the transition to new industries and skills**. A free-market approach that allows industries to **adapt organically** will yield better outcomes than direct intervention.

The AI Action Plan should:

1. **Resist pressure to regulate AI in an attempt to preserve outdated job categories.**
2. Focus on **AI-driven economic expansion**, which will create more opportunities than it displaces.
3. Encourage businesses to **embrace AI-driven efficiencies** rather than fear them.

The United States must **lead, not resist, the next wave of industrial evolution**.

IV. Open-Source AI is Essential for Decentralized Innovation

Artificial Intelligence must not become **a closed and controlled technology limited to a few corporate entities**. Open-source AI ensures that innovation remains decentralized and accessible to **academia, startups, and the broader research community**.

The AI Action Plan must:

1. **Encourage federal funding for open-source AI projects** that allow for public scrutiny and collaboration.
2. Ensure that government AI initiatives **do not disproportionately benefit proprietary corporate interests**.
3. Prevent licensing models that **restrict access to foundational AI technologies**.

A failure to prioritize open-source AI will result in **an AI oligopoly controlled by a few large entities**, which is a far greater risk than AI development itself.

V. AI is Critical to National Security and Must Be Developed with Strategic Intent

Artificial Intelligence is rapidly transforming the security landscape. If the U.S. does not integrate AI into **cybersecurity, military defense, and intelligence operations**, adversaries will. The consequences of failing to act decisively will be severe.

The AI Action Plan should prioritize:

1. **AI-driven cybersecurity defenses** to protect against AI-powered cyberattacks.
2. **Autonomous threat detection systems** for intelligence and defense applications.
3. **Strategic AI collaborations** with allied nations to maintain a technological advantage.

Conclusion: The U.S. Must Lead, Not Over-Regulate

The United States has historically led **every major technological revolution**. AI must not be the exception. Overregulation and excessive caution will not **stop AI progress globally**, but they will **ensure that leadership shifts away from the U.S.**

The AI Action Plan must:

- Prioritize **AI leadership over excessive regulation**.
- Ensure **AI is not held to a higher standard than other technologies**.
- Recognize that **workforce shifts are inevitable and should not be artificially mitigated**.
- Protect **open-source innovation to prevent corporate monopolization**.
- Invest in **AI for national security** to maintain strategic dominance.

Artificial Intelligence is not a threat. **The real threat is failing to lead in its development.**

I appreciate your consideration of this response and encourage OSTP and NITRD to develop an AI policy that ensures the United States remains at the forefront of innovation.

Sincerely,

Kurt Hamm
