Public education is successful in America because of the brilliance and dedication of American schoolteachers. In the coming AI economy, every American will work with AI collaborators all the time or lose the ability to work. An AI that can speak to very young children, and understand their speech, is an AI that can collaborate with both teachers and children to teach children the skills they need. The Federal government should support the creation of AI capable of speaking to very young children and understanding their speech.

Mark Hasegawa-Johnson

Professor of Electrical and Computer Engineering, University of Illinois at Urbana-Champaign
