Allowing AI to skirt intellectual property laws is anti-small business, anti-any business but tech speculator business, and will hamper innovation of everyday Americans. AI has no fair use exemption. It is a for profit scam perpetuated by tech companies looking to steal from creatives and creative industries in order to enrich themselves. They want to trick people into thinking algorithms are sentient when they're not.

AI seeks to create massive unemployment in creative industries and to flood those creative industries and the entire internet with garbage pieced together from the stolen hard work of real Americans, actual humans.

Furthermore, as algorithms and computers are not sentient, they do not possess discernment. They do not differentiate between fact or fiction, they can not analyze the quality of research or source material. They "hallucinate," because they're only capable of approximating realistic speech/sounds/imagery they've been fed. They're not capable of reasoning through or mindfully communicating anything, since algorithms aren't minds.

As IBM once said, computers can't be held responsible, therefore they shouldn't make management decisions. Altman, Musk, Thiel, Sacks, Andreessen, etc, etc all want to sell the government on the idea that computers can and should make management decisions about who remains employed in civil service, and eventually about every facet of our lives. I'll reiterate: they want to do this because it will make them even wealthier, and because they have an almost religious, fanatical devotion to obscure philosophies like long termism, which they think relies on AGI. They also envision mass surveillance of the population they plan to leave unemployed and/or exploited in the future. Neither they, nor their algorithms, can be trusted to safeguard our data or the future of the American public.

I do not consent to a handful of tech billionaires using my creative work and personal data for their private gain, ever. Like bitcoin and nfts, AGI is a scam. Even IF they ever achieved it, AGI would still not be able to be held responsible for decisions impacting humans on an individual or population level, and it would be very dangerous for private industry to possess it, as the public can't vote out unelected billionaires.

Don't listen to people who read and watched all the same science fiction I read, but missed the point of it. They want to create dystopia around what amounts to fancy text predict. Trying to sell you on the idea that fancy text predict is intelligence is a scam. Trying to develop technology in service of creating dystopia is also a scam.
