Matt Barnhouse

To whom it may concern, I would like to address my concerns over the development and implementation of AI into the everyday lives of the citizens of the United States and this country as a whole. The concerns I have are, will this AI be over seeing or interacting with the citizens lives and if so. Who will be responsible for overseeing its implementation and controlling the oversight to the privacy and the accountability of the information that the AI is going to be collecting/providing to the citizens. Due to AI being used in Apple products has already been tampered with to where citizens putting in the word racists into their phone via voice has been showing Trumps name just prior to actually putting the right word. This is no glitch or mistake, it was purposely done by someone. Then during the election cycle getting information via AI through Google, when you asked why you should for Trump it would say there was no information and couldn't give it due to political reasons I believe it was. But if you asked about Karmala it had no problem rambling off reason to vote for her. Once again not a so called glitch or mistake. So who's going to be overseeing this AI to make sure it is not being altered or manipulated or abused in a way that the citizens won't be getting false information or no information on some things or individuals? This would need to be monitored daily for the fact it could be tampered with by anyone working at the company or companies that will be supplying it. Who's going to decide what information is first put into the AI's system? The fact that it's already being manipulated and that the history of technology being used against the citizens of this country. I'm more than very concerned about this for the safety of this country and its citizens. WHAT KIND OF GUARANTEES, PROTECTION AND RECOURSE ARE THE CITIZENS GOING TO HAVE. To battle against the abuse that's sure to come from this type technology. Thanks for the opportunity to voice my concerns. M.Barnhouse
