Dear AI Action Plan Team,

I am writing in response to the Request for Information on the Development of an Artificial Intelligence (AI) Action Plan. The rapid advancement of frontier AI models presents both unprecedented opportunities and significant security risks, particularly in the realm of cybersecurity and national defense. To maintain America's leadership in AI while protecting our critical infrastructure, I urge the immediate prioritization of a White Hat Hacking Manhattan Project as a foundational component of the AI Action Plan.

Why This is Critical

The most advanced AI models—especially those capable of code generation, automation, and self-improvement—pose a high risk of being leveraged for cyberattacks, both by nation-state adversaries and independent threat actors. These systems can rapidly identify and exploit vulnerabilities in our digital infrastructure, outpacing traditional security measures.

The U.S. must act first by deploying our own frontier AI models to uncover and patch vulnerabilities before adversaries do. The best defense against AI-driven cyber threats is to use AI offensively in a controlled, ethical manner—a strategy that has already been validated in cybersecurity circles.

Key Proposal: A National White Hat Hacking Initiative

Modeled after the Manhattan Project, this initiative would:

1. Deploy the most powerful AI models to actively search for vulnerabilities across government, military, and critical private-sector systems.
2. Simulate adversarial AI-driven cyberattacks to predict and prevent real-world threats.
3. Develop AI-driven security frameworks that evolve in real-time to counteract emerging threats.
4. Fund public-private partnerships to create the most secure AI and software infrastructure in the world.
5. Ensure ethical and legal compliance while maximizing proactive defense strategies.

Why This Must Be the First AI Initiative

If we do not launch this effort immediately, our adversaries will weaponize AI against us. The nation that first builds AI-capable cybersecurity frameworks will dictate the terms of global cyber warfare and digital security for decades. The U.S. cannot afford to be reactive; we must be proactive.

I strongly urge the AI Action Plan to prioritize AI-driven security and ethical hacking as the first and most critical AI application to ensure national resilience in the face of accelerating AI capabilities.

Thank you for considering this urgent recommendation. I look forward to your leadership in securing America's future in AI.

Best regards,
Matthew Kruse
