Faisal D'Souza, NCO
Office of Science and Technology Policy
Executive Office of the President
2415 Eisenhower Avenue
Alexandria, VA 22314

Submitted by email to: [REDACTED]

Dear Mr. D'Souza:

MetaEthics AI appreciates the opportunity to respond to the Office of Science and Technology Policy's (OSTP) Request for Information regarding the development of an Artificial Intelligence (AI) Action Plan. We commend the Administration's dedication to collaborating with organizations such as the American National Standards Institute (ANSI), whose call for input on AI underscores the necessity of leveraging standards to strengthen American leadership in AI. Just as important, ANSI's emphasis on global engagement aligns with our belief that forging international partnerships is vital to harnessing AI's potential for the collective good and bridging divides across nations.

At MetaEthics AI, our mission is to develop ethically grounded AI systems informed by robust philosophical frameworks, historical insights, and continuous societal feedback. We recognize that efforts to create shared AI standards can not only enhance trust in new technologies, but also facilitate dialogue across diverse cultural and geopolitical landscapes. Toward that end, we have pioneered **Social Functional Categorization Theory (SFCT)**—an adaptive, ethics-focused framework designed to quantify AI's impact on society in dynamic, context-sensitive ways.

Informed by ANSI's call for greater collaboration and standardization, we propose the following priority areas to ensure that the AI Action Plan fosters both domestic and international engagement:

1. Universal Ethical Evaluation of AI Systems

- **Harmonize Domestic and International Standards**

Partner with ANSI, international standards bodies (e.g., ISO/IEC, IEEE), and other relevant stakeholders to create shared evaluation benchmarks for AI ethics and risk assessment.

- **Integrate Adaptive Ethical Frameworks**

Encourage AI developers to adopt methodologies like SFCT, ensuring that ethical guidelines evolve with cultural shifts and emerging technologies.

2. Transparency and Explainability

- **Global “Explainability Scorecards”**

Develop consistent, internationally recognized “explainability scorecards” that offer clear, accessible insight into AI’s decision logic.

- **Periodic Data and Bias Audits**

Mandate regular reports detailing data sources, methodology, detected biases, and remediation efforts—facilitating comparability across borders and organizations.

3. Enhanced National Security through Ethical AI

- **International Coordination on Dual-Use AI**

Coordinate with global partners to establish guidelines for identifying and mitigating dual-use AI technologies. Such collaboration can reduce misunderstanding, encourage responsible research, and mitigate threats before they escalate.

- **Multinational Threat Intelligence Task Forces**

Form cross-border task forces involving security agencies and industry experts to share real-time AI intelligence, ensuring swift response to global threats.

4. Interdisciplinary Collaboration and Public Participation

- **Global AI Ethics Forums**

Convene public forums—nationally and internationally—to gather input from academia, industry, civil society, and the public, ensuring that policy formulation reflects a diversity of perspectives and fosters mutual understanding.

- **Standards-Driven Incentive Programs**

Establish grants and collaborative initiatives that encourage multi-stakeholder research on AI’s social impacts, informed by existing and emerging international standards.

5. Equitable Economic Prosperity and Workforce Resilience

- **AI Workforce Reskilling Consortia**

Fund programs that unite governments, educational institutions, and industry players worldwide to equip at-risk communities with AI-related job skills, fostering inclusive economic growth.

- **Global AI Impact Dashboard**

Partner with the Bureau of Labor Statistics and international equivalents to create a shared “AI Impact Dashboard,” promoting transparent tracking of labor market shifts, wage trends, and employment disruptions on a global scale.

6. Adaptation of AI to Biotechnological Systems

- **Cross-Border Collaboration for Public Health**

Support research consortia that combine AI-driven biotech innovations with global regulatory standards, accelerating progress in diagnostics, preventive care, and sustainable agriculture.

- **Streamlined Approval for International Needs**

Develop standardized review pathways—aligned with international guidelines—to speed the safe deployment of biotech solutions in crises or areas of significant humanitarian need.

7. Establishing an International Independent AI Committee

Given the global implications of AI’s rapid evolution, we strongly endorse the creation of an **International Independent AI Committee**, potentially in partnership with standards organizations like ANSI and recognized global bodies. Such a committee would:

- **Coordinate Ethical and Technical Standards**

Facilitate alignment across diverse regulatory and standards frameworks, reducing redundancies and bridging cultural divides.

- **Provide a Neutral Conflict Resolution Forum**

Offer a venue where policymakers, industry, and civil society can address disputes, promote best practices, and share knowledge.

- **Ensure Long-Term Sustainable AI Development**

Maintain an evolving roadmap that reflects new technological milestones, emerging ethical dilemmas, and fresh insights gained from real-world AI deployments.

In conclusion, MetaEthics AI is prepared to collaborate with the OSTP, ANSI, and the broader global community to develop and operationalize an AI Action Plan that unifies international perspectives, fosters high ethical standards, and demonstrates leadership in responsible AI innovation. By embracing transparency, adaptability, and a commitment to bridging divides, the United States can guide AI’s transformative capabilities toward serving humanity’s shared interests.

We appreciate your time and consideration.

Respectfully,

Jacob Miller

Founder, MetaEthics AI
