Subject: [External] AI Action Plan Concerns
Date: Monday, March 17, 2025 9:19:19 AM

CAUTION: This email originated from outside your organization. Exercise caution when opening attachments or clicking links, especially from unknown senders.

To whom it may concern,

Frankly speaking, AI-generative models should not be able allowed to train on copyrighted materials as to do so would severely undermine creative industries across the board- from the art sector to the film industry and everything in-between. The extent to which these models have already advanced has only been due to the fact that they have unethically trained on the catalogs of uncountable artists' works without their consent or in the case of platforms such as Twitter for instance, underhandedly set profiles to allow their content to be trained on by default. AI-generative models can only operate by infringing on the work of others while it solely benefits.

Furthermore, allowing these models unrestricted access to copyrighted materials would create a crisis of who can claim ownership to its creations. The line would be blurry between who can claim its works -the owners of the AI models or the artists and creators from which its models were trained on.

One final concern that should not be overlooked is how AI-generative models can easily be weaponized for nefarious ends. Voice banks, if allowed to train without restriction, can and already are used for disinformation; celebrities' voices and likenesses are used to fraudulently advertise less-than-reputable services. To allow these models to train on works unimpeded would also allow them to impersonate anyone without being able to distinguish one from the other.

To reiterate once again, AI-generative should not be allowed unrestricted access to train on copyrighted materials. Thank you for your time.
