Myla Azen

My name is Myla Azen, and I am a graduating senior from Avonworth High School. I researched the impact of generative AI on religious persecution for a semester course and recently studied this administration's viewpoint on AI regulation. Based on two months of student research, I think regulation and preventative laws are essential to ensure that artificial intelligence flourishes beneficially. With AI quickly advancing globally, religious groups across the nation are increasingly vulnerable to the potential misuse of AI. Specifically, the Uyghur Muslim population in China has been targeted under "anti-terrorism" sentiments. AI-powered surveillance and policing tactics have been utilized to suppress religious groups and violate human rights. Preventative measures must be put in place to reduce the risks of AI being weaponized against vulnerable populations. I believe such regulations can protect not only religious freedoms but also the fundamental rights of all individuals.
