RE: Request for Information on the Artificial Intelligence (AI) Action Plan

To Whom it May Concern:

NextGen Energy Partners appreciates the opportunity to submit comments on top priority policy actions that should be contemplated in the proposed Artificial Intelligence (AI) Action Plan submitted in Federal Register Notice 2025-02305 (Notice) needed to strengthen America's AI dominance and remove market barriers to spur private sector AI innovation.

The firm recommends the America AI Action Plan encompass and put forth a roadmap for America's AI and Electricity System Integration as a national energy security imperative to transform America's power infrastructure. The AI Action Plan would establish a cross-sector working group comprised of investors, tech innovators, energy experts, and key government agencies among other stakeholder groups focused on the assessment and development of a roadmap for secure AI integration with America's Electricity Systems to ensure safe, secure, and trustworthy AI use in grid infrastructure.

The AI revolution coincides with energy technological breakthroughs that can transform America's national electric grid and power infrastructure across regions and consumers. Consideration of AI and its implications from an energy security perspective is critical to secure America's AI and energy dominance. The roadmap for America's AI and Electricity System Integration will help strengthen the national electric grid and address the following:

- Grid-related technological breakthroughs
- Software-driven demand load management
- Software-as-a-service (SaaS) offerings
- Aggregation of distributed energy resource (DER) systems
- Virtual power plant (VPP) operating models
- Essential secure 24/7 power on critical infrastructure
- Energy security measures for AI integration

Thank you for the opportunity to submit comments for consideration of the AI Action Plan.

Respectfully,

Kimberly A. Johnston
CEO, NextGen Energy Partners
