I, Nathaniel Klein ensure this document is approved for public dissemination. The document contains no business-proprietary or confidential information. Document contents may be reused by the government in developing the AI Action Plan and associated documents without attribution.

I saw this AI Action Plan coming into effect recently and believe that restrictions that are there should be left in place. While working in the technological field I understand deeply that AI is helpful to my current working position, there are some very important quirks in it to take note of. Allowing the AI to grab from sources online or even in training centers for it everywhere even going through current copyright laws is not only inefficient but infringes on private sectors rights and will hurt them just as much as this could potentially be of use.

AI needs be finely tuned by a trained induvial hand as weird as that sounds. I work in the healthcare technological field and while we have AI in some elements of our products by Cisco, even if its trained outside by a professional before being implemented. It needs to go through a series of "tuning" by each individual institute. An example of this could be that a new AI trained elsewhere and not by the individual at the institute could cause a block on a Firewall sending MRI scans to our approved remote radiologist or even the opposite of allowing the MRI stuff to be sent to someone who has no business looking at it thus becoming a breach of HIPAA (Health Insurance Portability and Accountability Act).

I also feel as this might tread on Copyright Laws in the Entertainment/Artistic field. Imagine if this goes through, I feel as if this would inadvertently allow the AI to train itself on sources that are protected by copyright laws such as Characters from Disney to name an example. If this goes through, I could imagine Disney wouldn't be able to protect its copyright if the AI is stealing/using their existing media to create its own artistry of it and potentially could be sold by the people creating this and because of the restrictions being lessened from this AI action plan.

I wholeheartedly believe there is another way to advance our AI action plan in a different more competitive/ethical way that would lead to the development of even better technologies as it would have to be aware of the current laws in practice as part of its learning/development which will help sustain and put America's AI innovation a step above the rest of the AI's being developed.
