Subject: [External] AI Action Plan
Date: Monday, March 17, 2025 9:19:37 AM

CAUTION: This email originated from outside your organization. Exercise caution when opening attachments or clicking links, especially from unknown senders.

The first priority action for AI adoption for the US government should be to avoid adopting privately operated AI. It's bad enough that Elon Musk now has unfettered access to my IRS data. I don't want OpenAI and other private companies to get access too. Even if the data is locked in government cloud servers, it's potentially problematic -- unless everyone who has any access to the AI system has authorization to view all its training data, since AI systems have leaked PII before, it's a potential leak.

AI involves the neural network pruning less common observations from the training set (to varying degrees of success). This is not what you want for systems that need to be sensitive to nuance, which many government systems need to be as part of their legal obligations against discrimination, as well as many other needs. The action plan should therefore be incredibly conservative.

Best regards,
Neia Finch
