Subject: [External] AI Action Plan Comment
Date: Sunday, March 16, 2025 12:29:48 AM

CAUTION: This email originated from outside your organization. Exercise caution when opening attachments or clicking links, especially from unknown senders.

Recently, from an executive order by Donald Trump, a request was made in seeking an AI Action Plan to try and "define the priority policy actions needed to sustain and enhance America's AI dominance, and to ensure that unnecessarily burdensome requirements do not hamper private sector AI innovation."

This premise is extremely faulty, short sighted, and ultimately more damaging for science as well as hampering legal copyright & personal expression as a whole.

Generative media tools built off copyright abuse and stealing (often labeled as "AI" in current trends) is not the future of technology. More so, pursuing what is ultimately a divisive, abusive, and severely infringing method for breaking all forms of copyright would do nothing but sour our technological progress and halt us back, while the rest of the world will see fit to pursue technology that is not reliant on random generation methods that are impossible for the human brain to grasp, let alone fix or improve. It is the equivalent of allowing dangerous biological experiments on humans, but instead it is the very core tenets of art and all creative drives; the human mind behind them.

Therefore, as a formal comment and complaint, I recommend this plan to discuss the risks and dangers of AI, and how companies, governments, and organizations should receive limitations in the use of generative tools so as to preserve the absolute integrity of copyright, ownership, and property rights to one's own art creations.
