Subject: [External] AI Action Plan
Date: Tuesday, February 25, 2025 10:10:43 PM

Consistent with the good practice set forth in the [OPEN Government Data Act](#), which President Trump signed into law six years ago, as well as [section 10](#) of the GPRA Modernization Act more explicitly, the AI action plan should be published in open, standard, machine-readable format, like Strategy Markup Language (StratML, ISO 17469-1 and formerly ANSI/AIIM 22:2017).

Likewise, the developers of AI systems potentially affecting members of the public should be expected, if not required, to publish in such format the performance plans and reports for their applications.

Doing so will enable other AI systems to help stakeholders and organizations representing their interests become aware of those impacts and respond appropriately in support of their own interests, without imposing undue regulatory burdens on anyone.

Disclaimer: This document is approved for public dissemination. It contains no business-proprietary or confidential information. It contents may be reused by the government in developing the AI Action Plan and associated documents without attribution.

Likewise, the schemas for StratML Part 1, Strategic Plans, and Part 2, Performance Plans & Reports, are freely available for public use:

<https://stratml.us/references/StrategicPlanISOVersion20140401.xsd>
<https://stratml.us/references/PerformancePlanOrReport20160216.xsd>

It would be good if the schema for StratML Part 2 were used to enable semi-automated ingestion of agency performance reports into the Performance.gov site, including reports explicitly addressing their usages of AI systems.
