Subject: Artificial Intelligence Action Plan

Re: [RFI on the Development of an Artificial Intelligence Action Plan](#)

Submitted by email to [REDACTED]

Dear Mr. D'Souza:

[Pathway for Patient Health](#) is a mission-driven organization dedicated to enhancing global patient health by developing industry partnerships and innovative initiatives that drive excellence across the life science sector.

The Pathway AI/Digital Center appreciates the opportunity to submit comments through the Request for Information issued by the Networking and Information Technology Research and Development Program (NITRD), National Coordination Office (NCO), and the Office of Science and Technology Policy (OSTP) for the Development of an Artificial Intelligence (AI) Action Plan.

The benefits of AI through the products and work of the life science sector are immense, including examples such as: the ability of AI to greatly accelerate the discovery and development process of new cures, enhance clinical trial design and patient recruitment to increase patient safety, provide real-time data and analytics from AI-enabled medical devices, and enable predictive process capabilities to increase business continuity and product availability.

It is just as important to note that the risks of AI in the life science industry can be catastrophic with life threatening impact on mass populations. AI has a critical impact on the life science sector and ecosystem, since this sector directly affects human lives and is a significant target for criminal intent and terrorism. Consequently, this Artificial Intelligence Action Plan must build the essential infrastructure and safeguards to foster rapid innovation securely and ethically.

Considerations for the Artificial Intelligence Action Plan:

The Pathway AI/Digital Center believes the United States has a pivotal opportunity to integrate global excellence into an American policy that will provide the infrastructure for individual agencies to implement the appropriate governance of AI in a responsible way. Developing the Artificial Intelligence Action Plan by including the effective progress made by federal agencies and other nations is essential, as dismissing these contributions may cause American consumers to question the credibility of the United States as a leader in innovation and global respectability.

Please consider the following points during the development of your Artificial Intelligence Action Plan:

1. Streamline AI Governance and Regulation

- Establish clear regulatory frameworks to guide the development and deployment of AI technologies such that companies can develop products right-first-time and reduce regulatory burden.
- Streamline inter-agency and intra-agency regulatory processes to remove bureaucratic barriers.
- Conduct an assessment of existing regulations and procedures that inappropriately hinder AI innovation and deployment or do not provide enough protection.
 - Utilize insights from previous executive orders and existing infrastructure.
 - Engage in dialogue with industry experts throughout the refinement process of your AI policy.
 - Streamline collaboration mechanisms to reduce bureaucratic delays in AI initiatives.
- The following is critical for companies with products that span the globe and cross-over the regulatory authority of any single U.S. agency. Without the following, companies must repeat their work in different ways without any value:
 - Harmonize inter-agency and intra-agency regulations and regulatory frameworks where possible.
 - Harmonize the U.S. regulations and regulatory frameworks with existing global frameworks where possible.
- Regularly update guidelines/regulations based on emerging AI risks and technologies to maintain robustness and establish a system for broad communication of emerging AI Risks.

2. Excellence in AI Development

- Promote ethical considerations and human-centric design in AI development, including fairness, transparency, and accountability. Encourage the integration of ethical guidelines into AI development processes.
 - Implement measures to address biases in AI algorithms and datasets through data-driven approaches. Require transparency and explainability.

- Define and establish comprehensive safety protocols to govern AI development and deployment. Safety includes cybersecurity assurance (e.g., criminal activity has been prosecuted for using software in medical devices to infiltrate hospital systems).
- Base AI policies and practices on rigorous scientific research and data analysis.
 - Implement rigorous testing and evaluation protocols to ensure AI systems perform as intended without causing unintended harm. Consider “white hat hacking” to identify vulnerabilities in AI systems.
 - Promote the use of evidence-based methodologies in the AI ecosystem.
- Develop a process/system that will capture rapid, global advancements in AI so companies can keep their fingers on the pulse of innovation and remain state-of-the-art.
- Foster collaboration between agencies, researchers, and the private sector to drive implementable innovation.
 - Encourage public-private partnerships to accelerate AI research and development.
- Support initiatives that enhance competitive advantages in AI technologies globally.

3. Accountability

- Implement a strict accountability framework that ensures executive leaders are held personally responsible for the harm their products may cause, demanding the highest level of accountability for their actions and their company's impact on human lives.
- Establish consumer protection policies specific to AI applications – scope of what is included and what is excluded. This is critical for the consumer and the insurance industry, but also, the potential for unreasonable AI-specific lawsuits could thwart innovation.

4. Upskill American Workers and Population in the Age of AI

- Promote workforce development initiatives to ensure the U.S. workforce remains competitive in the rapidly evolving global AI landscape.
- Institute training programs to upskill workers for AI-related jobs.
- Develop policies that facilitate the advancement of workers whose jobs are affected by AI automation.
- Create educational curricula that integrate AI literacy and skills throughout the U.S. education system.

5. Government Transparency

- Publish the comments that have been submitted for your Request for Information.
- Publish your responses to each of the comments you have received for this Request for Information.
- Publish the final Action Plan with a timeline, measurable goals and benchmarks for each action.

- Conduct transparent, regular assessments to evaluate the effectiveness of the Artificial Intelligence Action Plan and disclose the results/outcomes.
- Adapt and refine the strategy based on evaluation outcomes and stakeholder feedback.

In conclusion, we appreciate this opportunity to provide input and may be contacted for clarification or further discussion.

Sincerely,

Marla Phillips
CEO and President
