Patrick Browne

I am the Associate Director for the Global AI Frontier Lab at NYU. International cooperation and exchange for AI research is crucial, as demonstrated by many critical international cooperative discoveries throughout recent history. In an increasingly isolationist international landscape, it is imperative that the United States continues to recognize comparative scientific strengths throughout the world, and utilize our alliances and global partnerships to bolster our scientific ecosystems and enhance our AI capabilities. The wealth of potential applications for the nascent AI field will only benefit from a broad set of perspectives and inputs, and international partnership and exchange among U.S. research institutions has a proven track record for success.
