Hello,

The current unregulated nature of generative AI is harmful to businesses and a competitive market. Without regulations, generative AI is currently able to train and steal from copyrighted materials, thus hurting and stealing from the copyright holders. Without copyright protections, businesses, especially smaller businesses, have a harder time competing in the market. And even large businesses are affected as it becomes even easier to infringe on their copyright. Without regulations, generative AI will weaken and possibly destroy all rights and protections to intellectual property, thus hurting and preventing innovation. Please regulate generative AI so that materials produced from it must prove they were not trained or draw from datasets that include copyrighted material to protect the individuals and businesses who own those intellectual properties from theft.

Hope you stay safe and well,
Penelope Epple
