To whom it may concern,

To date, Ai and robotics has been slow to benefit Main Street America. I am a published researcher in the financial planning world, an investor, and former business owner. I am in the process of buying and building laundromats with the purpose of integrating both of these technologies. The result will lower the laundry service price for Americans of all financial levels. We intend to develop training protocols for Ai driven humanoid robots, such as the Tesla Optimus, to operate during the night shift in traditional laundromats. This will also help thousands of mom-and-pop laundromats survive this coming technology revolution.

Proposal: I would propose that the Small Business Administration make special R&D loans available for this effort as well as subsidize lower-than-market interest rates available to laundromat owners to acquire this technology. Most laundromats do not offer a wash-dry-fold service, and will not be able to compete, in the near future, with the ones that do that utilize Ai and robotics. We have partnered with an industry-leading laundromat owner and consultant for this effort and will be opening our first locations in the coming months. We will be moving forward with or without any federal assistance, however, this request would greatly help the broader industry and an introduction to the Optimus team for beta test assistance would be appreciated.

Sincerely
Phil Walker
CEO-Founder, Einstein's Laundry
