Re: Request for Information on the Development of Artificial Intelligence (AI) Action Plan
[\(7555-01-P\)](#)

Dear Kirk Dohne,

On behalf of AI LA's Responsible AI Reading Group, a community in Los Angeles composed of AI academics, professionals, subject matter experts, and enthusiasts focused on Responsible AI, we appreciate the opportunity to provide feedback on the development of the Development of Artificial Intelligence (AI) Action Plan. Our collective expertise and ongoing discussions have led to several key recommendations that we believe will help ensure the United States remains a global leader in AI while promoting innovation, security, and economic growth.

Strengthening U.S. AI Leadership through Infrastructure Investment: A recurring concern among our community is the insufficient investment in AI infrastructure, including compute capacity, data centers, and hardware development. To maintain global leadership, the U.S. must prioritize:

- **Government-backed AI compute infrastructure:** The federal government should establish sovereign AI compute resources to prevent private-sector monopolization from constraining innovation.
- **Investment in AI chips and energy-efficient computing:** Addressing AI's energy consumption and improving model efficiency is essential for long-term sustainability and competitiveness.

Addressing Regulatory Uncertainty and Data Governance: Our community has identified the lack of clear AI data usage policies as a major barrier to U.S. AI leadership. To foster an innovation-friendly regulatory environment, the AI Action Plan should:

- **Establish standardized AI governance policies** to provide businesses and researchers with clear guidelines on data privacy, intellectual property ownership, and security best practices.
- **Strengthen U.S. AI data policies** to ensure transparent, ethical, and secure data usage while supporting public-private collaboration that balances innovation with privacy protections.

National Security, Cybersecurity, and AI Safety: Ensuring AI security and resilience against adversarial threats is a top priority. We emphasize the need for:

- Cybersecurity-first AI development: AI systems must be safeguarded against data breaches, adversarial attacks, and algorithmic manipulation.
- Investment in explainability and model assurance: To maintain public trust, the government should support the development of standards for AI transparency and robustness.

Workforce Development and Public AI Literacy: A strong AI workforce is critical for maintaining U.S. competitiveness. We highlight the need for:

- Expanded AI training and workforce initiatives, including investments in education, upskilling programs, and research fellowships to build a robust talent pipeline.
- Public engagement to address AI skepticism, ensuring the benefits of AI are widely understood and ethical concerns are proactively addressed.

Encouraging Open Innovation While Protecting National Interests: The AI Action Plan should strike a balance between open innovation and national security by:

- Supporting open-source AI development with safeguards to prevent misuse while fostering collaboration and competition.
- Strengthening export controls and international AI governance efforts to prevent adversarial actors from exploiting AI advancements against U.S. interests.

Conclusion: To solidify America's leadership in AI, the AI Action Plan must promote policies that:

1. Ensure **robust AI infrastructure investment** to sustain national competitiveness.
2. Provide **clear AI governance policies** that support responsible innovation.
3. Strengthen **AI security and safety** to protect against cyber threats.
4. Invest in **AI workforce development and public education**.
5. Support **open AI development while ensuring national security**.

Thank you for your attention to these recommendations.

Sincerely,

Paul-Marie Carfantan
