Recommended Priority Actions:

Cybersecurity

- Developing methods for preventing and detecting data poisoning, tracking sources for training data, and setting standards for data preprocessing.
- Improvements and enforcement on guardrails, and new methods to prevent prompt injection and jailbreaking.
- Model scanning and integrity checks

Education

- Ensuring the American public has basic AI literacy by incorporating the following in public education:
 - Appropriate uses of AI, and how to create effective prompts
 - Limitations
 - General terms and high-level understanding of architectures
 - Access to high school math and coding courses that support understanding of AI, such as linear algebra, that focus on applications in machine learning
 - Funding for STEM programs and AI research

Ethics

- Ensuring use of training data is fair, including allowing creators to refuse their works to be used, and establishing methods to compensate those who opt-in appropriately
- Methods for conducting appropriate assessments of risks before use
