Before AI companies are freed from copyright infringement uses, they should be required to maintain logs of the sources used in their AI creations. For AI to create anything, it must draw from the copyrighted information scraped to train it. The AI currently has no real intelligence. It is not trained in art or writing the way a human is. That's why AI can produce realistic images of people with six fingers. Even a small child knows there are five fingers even if drawn as five sticks. The AI is taking a copyrighted image(s) from its data base and creating something only marginally new with the work of real humans. The copyrighted data the AI is drawing from can be documented to help determine if the AI product is original.

This document is approved for public dissemination. The document contains no business-proprietary or confidential information. Document contents may be reused by the government in developing the AI Action Plan and associated documents without attribution.
