What should be “U.S. policy for sustaining and enhancing America's AI dominance in order to promote human flourishing, economic competitiveness, and national security”?

Do *nothing*. Whatever we are now doing, stop that. Don’t especially subsidize or regulate AI. Just allow a global free market in AI. AI has not shown special risks, harms, or features that deserve special consideration. So deter any AI harms, and promote AI benefits, via the usual laws and legal liability that apply to tech and commerce in general.

Who am I? I was an AI researcher for nine years, and have been a professor of economics for twenty five years. Some related writings of mine on the topic:
