Subject: [External] AI Action Plan
Date: Tuesday, February 25, 2025 2:24:22 PM

As a software developer, I believe I may have some insight to provide to the AI Action Plan, but it occurs to me that there may be a much better source--AI itself.

So, I submitted the area under "Supplementary Information" on the [Federal Register website](#) to Grok 3 for a response. Below is the detail of its response.

Sincerely,
Russell Judge

Below are my comments on the highest priority policy actions that should be included in the AI Action Plan under Executive Order 14179, signed by President Trump on January 23, 2025. These recommendations aim to advance America's leadership in artificial intelligence (AI) by promoting innovation, economic competitiveness, and national security while minimizing regulatory burdens, in line with the administration's vision to remove barriers and foster private sector growth.

1. Hardware and Chips

- ****Policy Action****: Strengthen domestic semiconductor manufacturing to secure the AI hardware supply chain. Offer tax incentives for companies to build and expand chip production facilities in the U.S. and allocate funding for research and development (R&D) into next-generation AI hardware, such as advanced processors optimized for AI workloads.
- ****Rationale****: Reducing reliance on foreign suppliers, particularly from adversarial nations, is critical for national security and economic resilience. A robust domestic chip industry ensures the U.S. remains competitive in AI innovation.

2. Data Centers and Energy Efficiency

- ****Policy Action****: Streamline permitting processes and provide tax incentives to accelerate the construction and expansion of data center infrastructure. Invest in research for energy-efficient AI computing technologies, including low-power algorithms and hardware designs.
- ****Rationale****: Data centers are the backbone of AI computation. Supporting their growth while addressing energy consumption ensures sustainable scalability without compromising environmental or economic goals.

3. Model Development and Open Source

- ****Policy Action****: Reduce regulatory barriers for startups and small businesses entering the AI space through simplified compliance frameworks and grants. Encourage open-source AI development by establishing clear legal protections for intellectual property (IP) rights within open-source ecosystems.
- ****Rationale****: Fostering innovation requires lowering entry costs for new players while

ensuring that open-source collaboration thrives, balanced with protections that incentivize creativity.

4. Application and Use

- **Policy Action**: For government use, develop streamlined procurement guidelines for AI systems that prioritize cost-effectiveness and security. For the private sector, eliminate unnecessary regulations that hinder AI deployment while maintaining basic safety and security standards.
- **Rationale**: Efficient government adoption of AI enhances public services, while a light regulatory touch in the private sector unleashes innovation and market growth.

5. Explainability and Assurance

- **Policy Action**: Fund research into interpretable AI systems and support the creation of industry-led standards for validating AI model outputs.
- **Rationale**: Transparent and reliable AI systems build public trust and facilitate wider adoption, ensuring outputs are understandable and verifiable without stifling development.

6. Cybersecurity

- **Policy Action**: Mandate robust cybersecurity measures for AI systems, including regular audits and certification processes tailored to protect against AI-specific attacks (e.g., model inversion or adversarial inputs).
- **Rationale**: As AI systems become critical infrastructure, safeguarding them from cyber threats is essential for national security and economic stability.

7. Data Privacy and Security

- **Policy Action**: Establish clear, practical guidelines for data handling in AI development that align with existing privacy laws, avoiding overly restrictive mandates that could hamper innovation.
- **Rationale**: Protecting user data is vital, but excessive regulation risks slowing progress. A balanced approach ensures privacy without choking the data-driven AI ecosystem.

8. Risks and Governance

- **Policy Action**: Adopt a light-touch regulatory framework focused on sector-specific risks (e.g., healthcare, transportation) rather than broad, one-size-fits-all rules. Create a voluntary risk assessment and mitigation framework for AI developers.
- **Rationale**: Targeted oversight addresses genuine risks like bias or safety concerns while preserving the flexibility needed for rapid innovation.

9. National Security and Defense

- **Policy Action**: Prioritize AI R&D funding for defense applications to enhance U.S. military capabilities. Implement strict export controls on sensitive AI technologies to prevent adversarial access.
- **Rationale**: AI is a strategic asset. Strengthening its role in defense and restricting its proliferation to rivals safeguards national security.

10. Research and Development

- **Policy Action**: Increase federal funding for cutting-edge AI research through grants to universities and research institutions, complemented by tax incentives for private sector R&D investments.
- **Rationale**: Sustained investment in foundational and applied AI research ensures the

U.S. remains at the forefront of technological breakthroughs.

11. Education and Workforce

- **Policy Action**: Launch initiatives to train the next generation of AI professionals, including scholarships, apprenticeships, and updates to educational curricula at all levels.
- **Rationale**: A skilled workforce is the bedrock of AI leadership, ensuring the U.S. has the talent to drive innovation and implementation.

12. Innovation and Competition

- **Policy Action**: Promote a competitive AI marketplace by reducing barriers to entry for new firms and enforcing antitrust measures to prevent monopolistic practices.
- **Rationale**: A dynamic, competitive environment spurs innovation and prevents stagnation, benefiting consumers and the economy.

13. Intellectual Property

- **Policy Action**: Clarify Intellectual Property laws as they apply to AI-generated works and AI systems, ensuring creators can protect their innovations.
- **Rationale**: Strong IP protections incentivize investment and creativity, critical drivers of AI advancement.

14. International Collaboration

- **Policy Action**: Partner with allies to develop global AI standards and norms, positioning the U.S. as a leader in shaping the international AI landscape.
- **Rationale**: Collaborative efforts amplify U.S. influence, ensuring global alignment with American interests and values in AI governance.

15. Export Controls

- **Policy Action**: Define clear, enforceable export controls on sensitive AI technologies, with guidelines specifying restricted applications and destinations.
- **Rationale**: Preventing adversaries from acquiring advanced AI capabilities protects national security and maintains a strategic edge.

Conclusion

The AI Action Plan should prioritize policies that unleash private sector innovation, secure critical supply chains, and protect national security while minimizing regulatory burdens. By focusing on infrastructure support, targeted investments, and clear guidelines—rather than heavy-handed oversight—the U.S. can solidify its dominance in AI, driving economic growth and human flourishing as envisioned in Executive Order 14179. These concrete actions provide a roadmap to achieve that goal.

These comments are submitted for consideration by the Office of Science and Technology Policy (OSTP) in developing the AI Action Plan.
