Subject: [External] AI Action Plan
Date: Sunday, March 16, 2025 2:44:55 AM

CAUTION: This email originated from outside your organization. Exercise caution when opening attachments or clicking links, especially from unknown senders.

Generative AI is labor theft. In the supplementary information the phrase 'promote human flourishing' is used; Generative AI is the opposite of human flourishing. It is specifically trying to replace human creativity and labor with derivative computer generated copies of the stolen human labor that was used to create it. To remove copyright impediments to encourage AI development would be both harmful to my personal livelihood and to the ability of corporations to police their own trademarks and copyrights.

Beyond that, AI isn't truly helpful in a huge number of the applications in which it's currently being used. It regularly 'hallucinates' incorrect information. It's well known that the AI summary on the Google search screen can and often does contain incorrect information (something reported by Google's own internal research). I do not believe AI holds a place in the future of the US. It is an overhyped tool being taught by venture capitalists who want to make a fast payout by convincing everyone that it is the 'next big thing' - rebranding machine learning and large language models 'artificial intelligence' to sell the idea.

Sincerely,

- Sarah Dungan
