Generative AI relies on stealing the copyright and intellectual property of other fields, encourages stealing personal information of the general public, and produces the most valueless median output possible. Gen AI actively poisons any field it touches, including other fields of Generative AI. As a professional computational linguist, I've seen my field absolutely destroyed by companies fundamentally not understanding AI, and over investing in it, instead of standard machine learning solutions, like phoneme recognition and language modeling that uses human written grammars.

As a professional that works in tech, AI is damaging to every company I've worked for, and has set my field back by decades. Do not let it utilize unaware user's data, steal artist's work, or use any form of copywritten media or protected data.
