Hello,

My name is Sean McDermott and I'm writing to submit a public comment for the AI Action Plan to urge the strongest possible regulation and accountability for companies creating, utilizing, and manipulating data using artificial intelligence (AI) technology.

AI is fundamentally parasitic technology. While there are definitely uses that can benefit society, private corporations are being subsidized by the government, driving up energy costs for the public, and taking a huge toll on the environment.

That is to say nothing of the harmful, discriminatory practices that investigations have repeatedly shown to be ingrained in AI usage across both public and private systems that the public has no way of opting out of.

Reporting has detailed how widespread the harms caused by AI are, from improperly denying critical benefits to vulnerable people to halting progress toward reducing emissions. It has cost Americans jobs, harmed students' education, and its tremendous environmental impacts have yet to be fully counted.

Some of the many important articles detailing these wrongs are by journalist Lois Parshley, including "Rage Against The Algorithm," published at The Lever (<https://www.levernews.com/rage-against-the-algorithm/>), and "The Unknown Toll of the AI Takeover" (<https://www.levernews.com/the-unknown-toll-of-the-ai-takeover/>).

It is ludicrous to assert that AI is necessary for national security. AI companies have stolen copyrighted works, breaking multiple laws, and now seek to retroactively protect their ill-gotten gains by manipulating the federal government.

I am firmly opposed to allowing OpenAI to profit as Americans suffer and pay the price. I urge NIST to immediately reconsider and constrict its Development of an Artificial Intelligence (AI) Action Plan, and refuse to codify AI training as fair use, which would make a mockery of the term.

Per your instructions, this document is approved for public dissemination. The document contains no business-proprietary or confidential information. Document contents may be reused by the government in developing the AI Action Plan and associated documents without attribution.

I hope that NIST takes this opportunity to put the public good over unfettered corporate exploitation and profit.

Thank you for your consideration,

Sean McDermott
