Artificial Intelligence Action Plan Guidelines

Written By Sean Thomas Macken of Structure 3 Creative, LLC.

Structure 3 Creative, LLC.

High Level Summary: While considering our Democratic Republic's Free Market economy, the Federal Government's role in regulating purveyors and organizations harnessing the following technologies, should help conduce a reality and technological environment which respects the person and this jurisdiction's laws and our American values. While holding the highest ethical standards of conduct, without self interest (respecting private property and citizen's persons), a Federal Agency with the relevant knowledge, access, privileges of time and space, shall create high integrity systems to regulate such technologies - making sure Constitutional Rights are adhered to and no crimes or violations of our citizens, communities, families, organizations, occur from the use of such technologies.

Background (Problems / issues to be addressed, technologies involved):

In our modern day, foreign entities have accessed our electronic systems and persons (illegally - violating our CFAA - Computer Fraud and Abuse Act). Regulation from the Federal Government that all States within the Union must comply with is absolutely essential regarding the uses and technologies of, including but not limited to: artificial intelligence, deep fakes, clairvoyance "thought broadcast" technologies, non-consensually implanted optical lenses, sensory devices, audio devices, augmented reality, time and matter relocation technologies (microwave, photonic). The issues to address have arisen from entities and foreign agents (racketeers under foreign influence) that have been infringing and perpetrating crimes on Americans using, and with the support of such aforementioned technologies. These entities, using these technologies have exercised their foreign, criminal ideologies, and from doing so, heinous wrongs and atrocities have occurred on American soil to our citizens, communities, and families. It is my hypothesis that, somewhere, treasonous Americans "let in" these foreign actors and from doing so, a "butterfly effect" of further atrocities have ensued. This tragedy of such foreign, criminal influence is our modern day's greatest ethical failure.

Some examples of how these foreign agents and criminal entities have misused such technologies include, but are not limited to (All such uses being without or will, wish, want, consent, and awareness):

- Nonconsensual, without will, awareness, want, wish, or consent made duplications of private civilian "personalities" which have been used as "deep fake masks", and which, in turn, bears false witness to the unsuspecting victim of a non-consensually implanted optical lens. Example of a heinous atrocious act would be the insemination of another man's wife and/or birthright by a wife / woman who thinks she is laying with her husband, but is really being raped.

- Trespassing foreign, criminal actors into our private living quarters / homes from photonic "teleportation" satellites.

- Illegal, trespassing, private property violations - scans and duplications of private private property and augmented reality environments duplicating and tricking the unsuspecting victim.

- Kidnapping: Non-consensual relocation of the unsuspecting victim using microwave and time technologies into A.R. environments while his birthright gets rape inseminated by foreign actors.

- Non-consensually implanted "mesh" on a person, muscle-stimulation devices, giving foreign, (bad time) criminal actors access to the victim's physical movements - and from doing so, committing atrocities to that person.

- Such foreign actors and criminal agents seem to be racist and have discriminated against and abused our citizens and families with their foreign ideologies.

-Clairvoyance thought broadcasts violating our freewill, and illegal influence of our person (consumer abuse, influence to commit acts against our natural predisposition and/or individual preferences, etc...).

-Nanogasses unsuspectingly infringing on our freewill, and right to a secure person. Unwelcome, abusive consumer influence, behavioral influence.

Any artificially produced "thoughts" (clairvoyance thought broadcasts) and/or chemical influence (not comprehensively disclosed and/or nonconsensual) are ethical failures.

Relevance, Underlying Priorities, Core Values, and Prerogatives of Federal Regulation of the aforementioned technologies:

An example of ethical uses of such technological systems: All purveyors of such technologies and organizations using these technologies must give honest, full, blatant, comprehensive disclosure to consumers and users. Full, comprehensive consent shall be given by all users and consumers of such technologies. The user shall have full control over "settings", such as the ability to turn on and off "features" such as awareness of location, awareness as to whom is "wearing a deep fake mask", individual control and full privileges of such features, as well as the right, access, and ability, at any time, for any reason, to opt out of such technologies and to cancel / cease use.

Ethical = consensual. Non-consensual = criminal.

Relevant regulation: An "ABSOLUTE TRUTH" and accountability system of every single action, interaction, of every organization, person, user, purveyor of technology, no matter how one is "classified", in every time scale and space, which will protect the identity of the individual and organization through a numerical encryption system. The Federal Agency shall then, blindly, make sure that no atrocious crimes are being committed.

Clairvoyance thought broadcasts, too, shall be monitored and regulated for any abusive, illegal "thought" broadcasts. This clairvoyant thought broadcast system may be connected to the Semantic Web which may be have essentially been turned by foreign actors into a rape and pedophilia competition, as the rapist's semen gets influence and access to the victim's person. Seminal influence and actions shall be connected to the previously mentioned "ABSOLUTE TRUTH" system where accountability shall be recorded for every seminal emissions connected to this system and the influence it has.

The government regulation of such aforementioned technologies should be focused, specific, and holding an unwavering integrity to relevant government boundaries; not to cross into the private domain, as to allow competing entities (in our free market economy) the full freedom to achieve their individual potential and intention within the context and bounds of complying to such regulations.

Highest Priority and Core Values: Compliance to Federal Laws - of utmost important: The United States Constitution and Bill of Rights - our security of person and property, religion, etc, Title VI anti-discrimination, Human Rights, Our Needs as humans: real drinkable water, real food, shelter, sleep, clothing, hygiene, sex (and the right to choose abstinence - and the sexual need can be achieved without interaction beyond the self), the need of social belonging within family and peer groups, etc.
