To the Networking and Information Technology Research and Development National Coordination Office, National Science Foundation,

While other guardrails may be necessary, I suggest that AI safety concerns can be efficiently addressed by clarifying that AI is a tool used by humans who remain responsible for the results of its use. It should be the responsibility of AI developers to accurately inform users about the characteristics of the tools they have developed. So informed, users should take responsibility for what results from their application of the tools. The same should apply whether the users are individual humans, or groups of humans acting as businesses or government entities. In the case of the military, responsibility for the results of AI use should go up the chain of command, just as does responsibility for the use of other tools.

Thank you for the opportunity to comment.

Stephen E. Lyke,
PhD, PE, concerned citizen
