CAUTION: This email originated from outside your organization. Exercise caution when opening attachments or clicking links, especially from unknown senders.

I understand the concerns external threats, e.g. China, and their lack of interest in maintaining intellectual property rights. But it is highly unfair and unjust that not 10 years ago, we machine learning researchers would label our data as publicly available or under intellectual property for use in machine learning or artificial intelligence.

Please, it needs to be understood that machine learning researchers were always wary of copyright laws and avoiding using copyrighted data in an effort to avoid copyright claims. Yet, now, this is seemingly no longer true and a profit-driven company is allowed to rip copyrighted data and hide this under the guise of a glossy and unknowing term, "the algorithm", which is meaningless.

For a concrete example, when an artificial intelligence algorithm is trained on confidential data, that neural network and its weights are then considered confidential. Yet, in the eyes of this Plan, when an artificial intelligence algorithm is trained on copyrighted data, that neural network and its weights have removed the copyrighted data. This seems very unfair to me.
