Steven Zuber, [REDACTED]

I am writing in response to the White House's Request for Information on the development of an Artificial Intelligence Action Plan. As AI systems become increasingly capable, it is imperative that their development is guided by careful, deliberate planning to ensure alignment with human values and long-term safety. The potential benefits of AI are immense, but so are the risks. One of the most pressing concerns is the possibility of misaligned superintelligence—AI systems that, due to insufficient oversight or flawed design, could act in ways that are dangerous to humanity. Researchers at institutions such as the Machine Intelligence Research Institute (MIRI) (intelligence.org), Center for AI Policy (CAIS) (safe.ai), and Control AI (controlai.com) have outlined scenarios in which advanced AI, if not properly controlled, could lead to catastrophic outcomes. A robust AI Action Plan must prioritize technical research into AI alignment, as well as policies that ensure AI systems remain interpretable and corrigible. Additionally, the economic impact of AI-driven automation must not be overlooked. Large-scale job displacement could lead to significant economic instability and social unrest. While automation has historically created new types of employment, the speed at which AI is progressing may outpace our ability to adapt. Policymakers must explore strategies such as retraining programs, adjustments to labor laws, and, potentially, new economic models to support displaced workers. I urge the administration to approach AI development with a strong commitment to long-term safety and societal well-being. This means supporting rigorous research into AI alignment, creating regulatory frameworks that prevent reckless AI deployment, and preparing for the economic shifts that AI will bring. By taking these concerns seriously now, we can help ensure that AI remains a tool for human progress rather than an existential risk. Thank you for your attention to this critical issue. I appreciate your leadership in shaping a responsible AI future and your solicitation for thoughts from your fellow Americans. I'm sure I'm not alone when I say I welcome further discussion on these concerns. Sincerely, Steven Zuber
