I. Introduction

On behalf of [Stone Labs](#), it is my privilege to submit these comments in response to the Office of Science and Technology Policy (OSTP) and the Networking and Information Technology Research and Development (NITRD) National Coordination Office’s Request for Information on the Development of an Artificial Intelligence (AI) Action Plan. Stone Labs is an AI Development and Integration agency that provides end-to-end services covering solution design, model development, and full-scale AI integration. Our global client work spans multiple industries (finance, healthcare, manufacturing, retail, and more), giving us a unique vantage on both the cutting-edge of AI innovation and the commercial realities of implementing AI systems responsibly.

We believe that AI presents a transformative opportunity for the United States to reinforce its global leadership in technology, economic competitiveness, and workforce development. Achieving these goals requires sensible, forward-looking policies that encourage private sector innovation while ensuring effective safeguards for national security, data privacy, and ethical responsibility.

II. Potential Impact of Commercial AI Software on OSTP Objectives

1. Accelerating Innovation and Adoption

- **Commercial Readiness:** Modern AI solutions - ranging from large language models to computer vision systems - are increasingly accessible and production-ready. Strategic policy measures that streamline regulatory pathways can help drive accelerated adoption across key sectors (e.g., healthcare, finance, infrastructure), while maintaining robust risk checks.
- **Industry Collaboration:** Cross-sector partnerships, in which private firms (like Stone Labs) collaborate with government agencies, spur the rapid development and deployment of new AI tools and platforms. Such partnerships could include proof-of-concept pilots under government sponsorship or improved grant programs for small and medium businesses innovating in AI.

2. Preserving National Security and Data Privacy

- **Security-Driven AI Development:** Commercial AI software that follows best practices in data encryption, identity management, and secure model design can reduce vulnerabilities. Encouraging these standards through voluntary frameworks and minimal but effective regulation can help industry meet national security objectives without undue burden.
- **Scalable Compliance:** Practical, unified guidelines on data handling, model explainability, and cybersecurity can keep AI development agile while supporting consistent compliance across sectors.

3. Enhancing Workforce Development

- **Education and Training:** Commercial AI solutions will continue to require specialized development and oversight. Government-driven partnerships with companies like Stone Labs can deliver training programs, apprenticeship pipelines, and reskilling initiatives for workers to ensure a steady supply of talent for emerging AI job roles.
- **State and Local Government Assistance:** Creating government-funded AI innovation centers in collaboration with private AI solution providers can upskill

local communities and expand participation in the AI-driven economy.

III. Recommended Policy Actions

To bolster American leadership in AI and support the flourishing of innovative commercial software, we recommend the following actions for inclusion in the AI Action Plan:

1. Establish Public-Private AI Testbeds

- **Pilot Programs:** Encourage pilot programs bringing government agencies and industry AI partners together to test and refine AI models on real-world problems. Emphasize structured feedback loops that inform future policymaking and shared best practices.

2. Expand AI Education and Workforce Initiatives

- **National AI Upskilling Campaign:** Leverage federal funding, private-sector expertise, and local institutions to create comprehensive AI certification programs. Include advanced skill tracks for data engineers, machine learning engineers, and AI solution architects, as well as foundational tracks for broader participation.

3. Adopt a Flexible Regulatory Framework

- **Adaptive Compliance:** Develop tiered guidelines for AI model development and deployment, matching regulatory requirements to a model's level of risk or domain of use. This approach preserves agility for commercial innovation while ensuring accountability where it matters most.
- **Proactive Security Standards:** Promote commercial AI providers' adoption of secure development standards (e.g., robust encryption at rest and in transit, zero-trust architectures) by offering incentives (tax benefits, direct funding support) for early compliance.

4. Encourage Open Source Collaboration

- **Open Source Platforms:** Incentivize open source AI frameworks and model-sharing initiatives to accelerate the discovery, testing, and refinement of novel AI techniques. This can reduce duplicative efforts across industry and academia and foster more rapid advances in critical AI subfields.

5. Foster International Cooperation

- **Global AI Alliances:** Collaborate with international partners to harmonize AI standards and protocols, ensuring interoperability and mitigating risks of cross-border data misuse. Sustained efforts in global dialogue and leadership will strengthen the United States' role as a central hub for AI development.

IV. Stone Labs' Contribution and Proposed Collaboration

As an AI Development and Integration agency, Stone Labs stands ready to assist OSTP, partner agencies, and industry participants by:

1. **Providing Tailored AI Solutions:** We design and develop AI-driven applications - ranging from predictive analytics to enterprise-scale model deployment - to meet specific strategic goals across government and private sectors.
2. **Implementing Secure, Scalable Systems:** Our expertise includes robust data privacy strategies, compliance with security regulations, and the design of scalable solutions that can adapt to varying workloads and mission-critical requirements.
3. **Delivering Training and Workforce Development:** We can partner with educational institutions and local governments to create efficient knowledge transfer programs that elevate AI fluency and hands-on expertise within both technical and non-technical communities.
4. **Co-Creating AI Standards and Best Practices:** We are prepared to share insights from our commercial projects and collaborate with policy committees to define ethical guidelines, risk assessments, and validation criteria for safe, transparent AI models.

V. Conclusion

Stone Labs fully supports the Administration's vision to maintain and enhance the United States' global leadership in artificial intelligence. Through well-calibrated policies that minimize regulatory burdens, foster innovation, and sustain a high level of security, America's AI enterprises can continue to thrive and bring immense value to the public.

We appreciate the opportunity to submit these comments and offer our expertise. Please feel free to contact us at [your preferred contact information] if further discussion would be helpful.

Sincerely,

Yauheni Kaziak

CEO & Founder, Stone Labs
