The United States must remain at the forefront of artificial intelligence (AI) development to ensure economic growth, national security, and technological innovation. In response to the Request for Information (RFI) on the AI Action Plan, I propose the following key areas of focus:

- 1. Research & Development (R&D) Investment** Increase federal funding for AI research in universities and public-private partnerships to drive innovation. Expand grants through the National Science Foundation (NSF) and the Department of Energy (DOE) for AI advancements in key industries such as healthcare, cybersecurity, and manufacturing. Support AI ethics and safety research to ensure responsible AI deployment.
- 2. Workforce Development & Education** Implement AI-focused curricula in K-12 education to build foundational skills in coding, machine learning, and data science. Provide federal incentives for AI training programs in higher education, vocational schools, and apprenticeships. Expand funding for AI workforce reskilling programs to prepare workers for AI-driven industries.
- 3. AI Infrastructure & National Security** Strengthen AI computing infrastructure, including cloud computing access and high-performance AI chip manufacturing in the U.S. Enhance AI capabilities in defense and cybersecurity to protect national security assets. Establish public-private partnerships to ensure U.S. firms have access to cutting-edge AI tools and research.
- 4. Ethical & Regulatory Frameworks** Develop voluntary AI guidelines that promote ethical AI use without stifling innovation. Encourage transparency in AI decision-making processes while protecting intellectual property. Implement policies that prevent AI bias and ensure fairness in automated decision-making.
- 5. AI Integration in Government Agencies**
 - Federal Efficiency & Automation:** Use AI to modernize government processes, automate administrative tasks, and reduce operational costs in agencies such as the Social Security Administration (SSA), Internal Revenue Service (IRS), and Department of Veterans Affairs (VA).
 - AI-Driven Public Services:** Implement AI for improved public services, such as chatbots for customer support in federal agencies and predictive analytics to enhance public health and disaster response efforts.
 - AI for National Security & Law Enforcement:** Expand AI applications in the Department of Defense (DoD), Federal Bureau of Investigation (FBI), and Department of Homeland Security (DHS) for threat detection, cybersecurity, and border security.
 - Data Management & Decision-Making:** Develop AI-powered data analysis tools to improve decision-making in agencies such as the Department of Health and Human Services (HHS) and the Department of Energy (DOE).
 - AI in Research & Space Exploration:** Enhance AI applications in NASA for deep space exploration, climate research, and autonomous robotic systems.
- 6. International Collaboration & Leadership** Strengthen alliances with global AI leaders to set international AI standards that align with U.S. values. Lead efforts to counter foreign adversaries' use of AI for cyber threats, misinformation, and economic espionage. Promote AI diplomacy to maintain U.S. influence in global AI governance. By prioritizing these strategic initiatives, the United States will maintain its position as a leader in artificial intelligence while ensuring economic prosperity, national security, and technological excellence.
