AI is deeply wasteful, expending truly ridiculous amounts of energy to shuffle training data around to create the facsimile of intelligence. There is no future for America with AI, and any people pushing for AI development should be under heavy regulations.

AI is fundamentally theft. Training data is needed to make any progress at all, training data that gets made by people. whether it's art, books, music, video, no matter what it is, AI is taking work created by humans, shuffling it, and pretending to have made something novel. It is theft of intellectual property, it is a violation of copyright, and it is a deeply cynical thing to do with the sum total of human knowledge.

AI is an excuse to fire people. A wide variety of industries have sought to replace human labor with AI, reducing jobs and ruining livelihoods. Not only can AI not acquire the lived experience of humans, something that makes humans flexible and able to respond in sensible ways to novel situations, but even if it could we have humans who already have that experience now.

AI does not comprehend what it says, or what is said to it. It is fundamentally incapable of understanding. It doesn't learn language, it learns patterns in data and replicates those patterns. It learns what words follow other words, and uses those to make reasonable-sounding replies that can range from deeply wrong to dangerous to simply nonsensical in context. AI should never be used for decision making, and should really never be used for anything without close human oversight.

The regulations that were in place were a good start, but they should really be even stronger: ensuring companies that want to train AI models use only data that they acquire ethically and with consent of the creators, limiting their maximum energy usage, etc.

The results of deregulating AI would be bleak for Americans and America.
