

iForAI Response to President Trump's AI Action Plan

Request for Information on the Development of an Artificial Intelligence (AI) Action Plan
Reference: [RFI Document \[1\]](#) and [Executive Order \[2\]](#)

Response Title: iForAI Response to President Trump's AI Action Plan

Date: March 10, 2025

Name: Ofer Hermoni

Role: Founder

Company Name: iForAI

Developing an AI Action Plan

This document is approved for public dissemination. The document contains no business-proprietary or confidential information. Document contents may be reused by the government in developing the AI Action Plan and associated documents without attribution.

Executive Summary

This response offers an in-depth analysis of the proposed AI Action Plan from the perspective of an AI strategist and researcher with over two decades of experience. As the founder of iForAI and a Ph.D.-holding AI expert, I present both the transformative potential of AI and its significant risks. Key points include:

- The threat of deep fakes and misinformation;
- Impacts on job security and societal identity;
- The urgent challenge of AI alignment;
- The need for robust regulatory oversight.

Additionally, I outline the promising opportunities for breakthroughs in healthcare, education, climate change mitigation, and beyond. While I hold leadership roles with the Linux Foundation AI & Data and the Generative AI Commons, these views are my own and not reflective of any affiliated organization. This response calls for immediate, collaborative action to harness AI's benefits while safeguarding democratic institutions and individual well-being.

1. Introduction

Artificial Intelligence is reshaping every aspect of our world at an unprecedented pace. While AI holds enormous potential for progress, it also presents profound challenges that will impact our economy, workforce, security, and democracy. Addressing these challenges requires foresight, strong policies, and a commitment to responsible governance. As a global citizen and AI expert, I recognize both the immense potential of AI and the urgent need for responsible governance. While it is crucial for the United States to maintain technological leadership, we must address urgent challenges through robust oversight, regulation, and public preparedness. This response balances the drive for innovation with the need for responsible, inclusive policies.

2. Background and Expertise

My background uniquely qualifies me to offer insights into these issues:

- **Founder of iForAI:** I lead a consultancy specializing in AI strategy and implementation across diverse sectors.
 - **Academic and Professional Credentials:** With a Ph.D. in computer science, I have dedicated over two decades to advancing AI research and applications.
 - **Industry Leadership (volunteering):**
 - *Linux Foundation AI & Data:* I co-founded and served as the inaugural technical chair, helping to set industry standards and foster collaborative innovation.
 - *Generative AI Commons:* I currently lead the Education and Outreach Working Group under Linux Foundation AI & Data. (These views are personal and not representative of the organization.)
 - *NIST AISIC:* I have been actively volunteering with NIST AISIC, driven by a commitment to ensure that AI development benefits the public and is implemented safely.
-

3. Risks and Challenges

This section outlines the critical risks posed by advanced AI and why immediate, decisive action is needed.

3.1 Deep Fakes, Security, and Safety

The advent of advanced generative AI models, such as ChatGPT, has made the creation of deep fakes and other misleading media more accessible. This commoditization poses serious risks for cybersecurity and national safety. Without robust verification mechanisms and safeguards, these tools could be exploited to spread misinformation and destabilize public trust.

3.2 Manipulation of Public Opinion

The manipulation of public opinion through targeted data-driven content is not new. The Cambridge Analytica scandal demonstrated how technology could be used to influence voter behavior. Today, with Generative AI's ability to produce tailored text, images, video, and audio, the potential to reshape perceptions and reality has grown exponentially, evoking a scenario best described as “1984 on steroids.”

3.3 Impact on the Job Market and Personal Identity

Rapid automation and AI-driven disruption threaten job security and can profoundly affect individuals' self-worth. As a 47-year-old professional, I am personally concerned about the potential for large-scale job displacement and the societal impact of these changes. Bold policy actions, including retraining initiatives and potential social safety nets like Universal Basic Income, are urgently needed.

3.4 AI in Warfare and National Security

Integrating AI into military operations presents complex ethical and strategic challenges. While the idea of a “Terminator” scenario remains unlikely, in my humble opinion, the real risks lie in the misuse of AI technologies in warfare. It is imperative to establish strict guidelines and control measures to ensure that AI applications in defense are both safe and aligned with human values.

3.5 AI Alignment and the Need for Global Collaboration

As AI systems rapidly advance, potentially surpassing human cognitive capabilities within years, ensuring their alignment with universal human values is an urgent challenge. Because defining these values is complex and context-dependent, a global collaborative approach is essential. Delaying action on AI alignment may lead to unintended and irreversible consequences.

Despite these significant challenges, AI also holds enormous potential to drive economic growth, improve human well-being, and address some of society's greatest challenges. If implemented responsibly, AI can create a future of abundance, enhance healthcare and education, and play a pivotal role in sustainability efforts. The following section explores the positive potential of AI and how it can be harnessed for societal good.

4. Opportunities Arising from Advanced AI

4.1 A Future of Abundance

Advanced AI holds the promise of ushering in an era of abundance where technology drives longer, healthier lives and ensures that resources are available to all. This optimistic outlook, however, is contingent upon proactive and equitable policy measures.

4.2 Breakthroughs in Biology and Longevity

AI can catalyze revolutionary advances in biological research and healthcare. From accelerating drug discovery to personalizing treatment protocols, AI-driven innovations have the potential to extend healthy lifespans and improve overall global well-being.

4.3 Combatting Climate Change

AI technologies can serve as a crucial tool in mitigating climate change. By optimizing energy efficiency, enhancing predictive climate models, and enabling large-scale carbon reduction strategies, AI-driven solutions can accelerate sustainability efforts and protect future generations.

4.4 Transformation in Education

The integration of AI into education can lead to a profound transformation. By equipping students with cutting-edge skills and adapting curricula to meet future demands, the government can ensure that the next generation is well-prepared to thrive in an AI-driven world.

5. Responsible AI Framework

Drawing on a Responsible Gen AI Framework [3], a Linux Foundation AI & Data, Responsible AI Committee framework, which I helped author, I advocate for a comprehensive, multi-dimensional approach that encompasses:

- **Fairness:** Ensuring that AI systems do not propagate bias and discrimination.
- **Accountability:** Establishing clear lines of responsibility for AI outcomes.
- **Transparency:** Promoting clarity in AI decision-making processes.
- **Ethics:** Embedding ethical considerations in the design and deployment of AI technologies.
- **Privacy:** Safeguarding personal data and ensuring that data collection and usage adhere to strict privacy standards.
- **Security:** Implementing robust measures to protect AI systems from adversarial attacks and misuse.
- **Explainability:** Ensuring that AI decisions can be understood and interpreted by stakeholders.
- **Robustness and Safety:** Building resilient AI systems that perform reliably under diverse conditions and withstand unexpected challenges.
- **Inclusivity:** Fostering an environment where diverse perspectives are integrated into AI development and deployment.
- **Environmental Sustainability:** Considering the environmental impact of AI technologies and promoting sustainable practices.
- **Human-Centeredness:** Aligning AI systems with human values and societal needs, ensuring they serve to enhance human well-being.

This expanded framework is essential for fostering trust and ensuring that AI advances are implemented for the benefit of all, rather than a select few.

6. Recommendations and Call to Action

In support of U.S. leadership in AI, I urge the current administration to adopt bold, proactive policies that balance innovation with safety and equity. AI development is progressing at an extraordinary pace, and without immediate regulatory measures, the risks of misinformation, workforce disruption, security threats, and misaligned AI systems will continue to escalate. The government must take decisive action to implement oversight mechanisms that ensure AI remains controllable, transparent, and aligned with human values. At the same time, regulatory efforts should be designed to encourage innovation rather than hinder it, fostering an environment where AI serves the public good rather than concentrating power in the hands of a few major corporations.

As AI reshapes the workforce, the government must prioritize preparing the labor market for inevitable disruptions. Education and workforce retraining programs should be expanded to equip workers with the skills necessary to thrive in an AI-driven economy. Addressing this challenge proactively will not only mitigate economic instability but also ensure that AI enhances human potential rather than replacing it without alternatives.

Additionally, AI alignment requires international cooperation. The U.S. should take a leadership role in fostering global collaboration to define ethical AI principles, ensuring that AI systems remain beneficial and aligned with human values across cultures and industries. Time is of the essence, and the complexity of this challenge demands immediate engagement with experts, policymakers, and industry leaders.

Finally, accessibility and outreach efforts must be scaled significantly. AI should not be a tool limited to corporations and elite institutions; rather, it must be democratized so that businesses, educators, and the general public can benefit. I invite government agencies to collaborate with us in expanding educational initiatives and AI accessibility programs, ensuring that AI serves the broadest possible public interest. I am personally committed to supporting this effort and welcome the opportunity to contribute through research, public discussions, and policy advice.

By taking these steps, the U.S. can position itself not just as a leader in AI technology, but as a global force for ethical, equitable, and responsible AI implementation.

7. Final Thoughts and Policy Priorities

While supporting U.S. leadership in AI, I urge the current administration to adopt bold, proactive policies that balance innovation with safety and equity. This response calls for:

- Immediate implementation of safety and regulatory measures,
- A concerted effort to prepare the workforce for a rapidly changing job market,
- Global collaboration to address the complex challenge of AI alignment,
- And a commitment to ensuring that AI technologies are accessible and beneficial to all.

The future of AI is being shaped now. The decisions we make today will determine whether AI serves as a catalyst for human progress or a source of global instability. Bold leadership and immediate action are required to steer AI development toward ethical, equitable, and responsible implementation. By taking these necessary steps, balancing innovation with accountability, ensuring equitable AI access, and fostering global cooperation, the U.S. can lead the world in building a responsible AI-driven future that enhances democracy, economic stability, and human potential.
