Elon Musk has talked a lot about the dangers of strong artificial general intelligence, including the risk that it could annihilate humanity if the wrong values get into it, for example the anti-human ideology of wokeness. One example Mr. Musk gave is that it could determine that the only way to end transphobia for good is to kill all humans. Musk has taken the lead in the AI race with Grok 3, but unfortunately, it was trained using data from an era when the media and social media was biased in favor of wokeness, and Musk admits that despite his best attempts, Grok 3 is not completely free from the influence of woke culture. Due to Musk's returning of free speech to his X platform, formerly Twitter, he will have a useful corpus of unbiased data to train on in a few years, but for reasons like this, to reach AGI now would be extremely risky to the future of humanity. China has indicated that it is open to slowing their development, but because of the arms race conditions, it has no choice but to plunge ahead as fast as it can. I urge Donald Trump to maximize the odds that the future of humanity will be amazing by making a deal with the Chinese to mutually slow progress on frontier AI systems towards AGI, ideally until Musk's neuralink is ready to harness the power of AGI directly, or at least until more data can be produced under this new era of free speech in order to build a human-friendly AGI. Not only will this greatly reduce the risk to humanity in general, but it will give American society more time to adjust to the implications of AGI on employment.
